## **DETAILED ACTION**

### ***Drawings***

1. Figure 5 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 101***

2. Claim 4 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The basis of this rejection is set forth in a two-prong test of:

- (1) whether the invention is within the technological arts; and
- (2) whether the invention produces a useful, concrete, and tangible result.

For a claimed invention to be statutory, the claimed invention must be within the technological arts. Mere ideas in the abstract (i.e., abstract idea, law of nature, natural phenomena) that do not apply, involve, use, or advance the technological arts fail to promote the "progress of science and the useful arts" (i.e., the physical sciences as opposed to social sciences, for example) and therefore are found to be non-statutory

subject matter. For a process claim, the recited process must somehow apply, involve, use, or advance the technological arts.

In the present case, claim 4 only recites an abstract idea. The recited steps of merely obtaining information about an amount of product consumed and performing a mathematical analysis to determine standard deviation of product consumed does not apply, involve, use, or advance the technological arts since all of the recited steps can be performed in the mind of the user or by use of a pencil and paper. These steps only constitute an idea of how to manage consignment of product.

Additionally, for a claimed invention to be statutory, the claimed invention must produce a useful, concrete, and tangible result. In the present case, the claimed invention produces amount of product consumed (i.e., repeatable) used in determining and selecting product to be consigned (i.e., useful and tangible). Although the recited process produces a useful, concrete, and tangible result, since the claimed invention, as a whole, is not within the technological arts as explained above, claim 4 is deemed to be directed to non-statutory subject matter.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cowe et al. (5,671,362), in view of Applicant admitting Prior Art.

Cowe et al. discloses a consignment marketing system and method of surgical and medical supplies that is operable at a customer facility to monitor and report materials traffic into and out of storage in storage volumes defined at storage devices at the customer facility. Cowe further discloses analyzing displacements of items on shelf and to maintain an accurate accounting of stock. Cowe further discloses tracking and monitoring of electronic shelf unit in order to manage inventory movement remotely. Cowe further discloses data processing system to process activity output and report product item traffic. However Cowe et al. fail to explicitly disclose setting of expiry date ranks classified according to deviation values.

However Applicant admits in the background of the invention ways to perform rotation of product in order to enable a medication to be consumed before its expiry date. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the inventory management of medical supplies of Cowe et al. to include the rotation procedure taught by Applicant admitted prior art in order to efficiently dispose of medical supplies.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Haitin et al., Frederick et al., DeBusk et al., and Holmes et al. are

Art Unit: 3627

cited for disclosing a system and method of dispensing medical supplies and restocking of the same.
